If ever there was a car that exuded British style

it was the Armstrong Siddeley. From the vast leviathans of the 1920s to the Art Deco inspired cars of the thirties to the restrained post-modernism of the 1950s. Somehow, for all these design influences Armstrong Siddeleys came out looking good, and very British indeed. A complete, graphically illustrated history from a unique socio-economic perspective this book brings the Siddeley marque to life. Extensively illustrated throughout with over 460 photographs this book is a fascinating piece of literature for automotive and historical enthusiasts alike. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. Over 1,100 businesses list with the SURPLUS RECORD. April 2023 issue. Vol. 100, No. 4 From Abbott-Detroit to Zip, this unique reference book documents American gasoline-powered automobiles manufactured for the model years 1906 through 1915, the Brass Era. In these explosive early years of automotive history, a vast number of manufacturers—most of which failed within two years—produced a range of cars whose sheer diversity is unmatched in later times. The short corporate lifespans and constant change throughout the industry left a fragmented historical record, with data about specific models scarce and scattered in later sources. Here the basic facts of 4,000+ cars, painstakingly researched in all available period sources, are collected and trends of the

era are analyzed. Written to serve the needs of construction industry professionals, this practical handbook provides a consolidated guide for design engineers and project managers, as well as maintenance professionals, technicians and others who must accurately specify electrical equipment.
