Products Liability Oct 29 2020 **Staff Participation and Public Management Reform** Dec 19 2019 This book explores the role of civil servants and their trade unions in the public management reform process, framing it in its economic, social, cultural and legal contexts. Building on neo-institutional and stakeholder theories, the book shows how staff and their representative organisations have influenced the formulation and implementation of public management reforms in twelve OECD countries. This study challenges top-down elite theories that have dominated the existing literature, explaining how staff participation practices, both direct and indirect, have

impacted on the implementation of reforms in different ways in different countries. The book concludes that variations in staff participation in the reform process depend upon institutional and political factors and the distribution of power in the employment relationship.

Globalization and Transformation Oct 09 2021
In *Globalization and Transformation*, Bruce
Mazlish examines developments in
contemporary warfare, economy, technology,
and religion as fundamental factors in human
experience that have accelerated global change
in recent years. Continuing the analysis he
began in *Reflections on the Modern and the
Global*, Mazlish delves into human history,
examining who we were so as to help us
understand who we are today. Early in the
volume, Mazlish highlights the British historian
Geoffrey Barraclough, who foresaw the
trajectory of world events that gave rise to the
"New Global History." He also examines
humanity's progress, reminding us of
contemporary globalization's precursors: the
theories of Charles Darwin; the concept of the

global and the local coupled with inquiry into
the concept of parts and wholes; merchant
empires, such as the English and Dutch East
India companies that crisscrossed the ocean in
pursuit of profits and power; anti-globalization;
and the linkage of globalization to the very
concept of humanity. Though globalization is a
complex concept, and versatile in its
applications, Mazlish focuses on its
transformational characteristics, noting that
globalization's impact is not uniform across
society's culture, politics, or economics. Some
parts of the world have yet to accept the
challenge to their past traditions. These
stimulating essays offer new insights into a
major phenomenon of our time.

Alan Turing Decoded Dec 23 2022 Alan Turing
was an extraordinary man who crammed into
his 42 years the careers of mathematician,
codebreaker, computer scientist and biologist.
He is widely regarded as a war hero grossly
mistreated by his unappreciative country, and it
has become hard to disentangle the real man
from the story. Now Dermot Turing has taken a
fresh look at the influences on his uncle's life
and creativity, and the creation of a legend. He
discloses the real character behind the cipher-
text, answering questions that help the man
emerge from his legacy: how did Alan's
childhood experiences influence him? How did
his creative ideas evolve? Was he really a
solitary genius? What was his wartime work
after 1942, and what of the Enigma story? What
is the truth about the conviction for gross

indecenty, and did he commit suicide? In *Alan
Turing Decoded*, Dermot's vibrant and
entertaining approach to the life and work of a
true genius makes this a fascinating and
authoritative read.

Solar Energy Index Nov 22 2022 Solar Energy
Index is an index of resources dealing with
solar energy, including archival materials from
the International Solar Energy Society
collection; references to articles in major solar
journals; patents and pamphlets; National
Technical Information Service reports; unbound
conference proceedings; and other assorted
reports. Both theoretical and "how-to-do-it"
publications are well represented. This book
places particular emphasis on terrestrial solar
thermal and photovoltaic applications of solar
energy. Subjects are classified according to
physics, terrestrial wind, collectors, space
heating and cooling, economics, materials,
distillation, thermal-electric power systems,
photoelectricity, solar furnaces, cooking,
biological applications, water heaters,
photochemistry, energy storage, mechanical
devices, evaporation, sea power, space flight
applications, and industrial applications. Topics
covered range from wind energy and
bioconversion to ocean thermal energy
conversion, heliohydroelectric power plants,
solar cells, turbine generation systems,
thermionic converters, batteries and fuel cells,

and pumps and engines. This monograph will be of interest to government officials and policymakers concerned with solar energy. *Advancement in Materials, Manufacturing and Energy Engineering, Vol. I* Jan 20 2020 This book (Vol. I) presents select proceedings of the conference on "Advancement in Materials, Manufacturing, and Energy Engineering (ICAMME 2021)." It discusses the latest materials, manufacturing processes, evaluation of materials properties for the application in automotive, aerospace, marine, locomotive, and energy sectors. The topics covered include advanced metal forming, bending, welding and casting techniques, recycling and re-manufacturing of materials and components, materials processing, characterization and applications, materials, composites and polymer manufacturing, powder metallurgy and ceramic forming, numerical modeling and simulation, advanced machining processes, functionally graded materials, non-destructive examination, optimization techniques, engineering materials, heat treatment, material testing, MEMS integration, energy materials, bio-materials, metamaterials, metallography, nanomaterial, SMART materials, bioenergy, fuel cell, and superalloys. The book will be useful for students, researchers, and professionals interested in interdisciplinary topics in the areas of materials, manufacturing, and energy sectors.

Voices of the Soviet Space Program Apr 03 2021 In this remarkable oral history, Slava

Gerovitch presents interviews with the men and women who witnessed Soviet space efforts firsthand. Rather than comprising a "master narrative," these fascinating and varied accounts bring to light the often divergent perspectives, experiences, and institutional cultures that defined the Soviet space program.

Systems and Management Science by Extremal Methods Jul 18 2022 This volume, *Systems and Management Science by Extremal Methods*, is the second in a series dedicated to honoring and extending the work of Abraham Charnes. The first volume, entitled *Extremal Methods and Systems Analysis* (Springer Verlag, Berlin, 1980), was edited by A.V. Fiacco and K.O. Kortanek. Subtitled "An International Symposium on the Occasion of Abraham

Charnes' Sixtieth Birthday," this first volume consisted of a selection from papers presented at a conference in honor of Professor Charnes held at The University of Texas at Austin in September 1977. This second volume consists of papers, to be described more fully below, that were presented in a similar 2 conference held at the IC Institute of The University of Texas at Austin, Texas, in October of 1987, to honor Dr. Charnes on his seventieth birthday. All these papers were written by scholars and scientists whose own work has been affected by the contributions of this distinguished scholar and educator over a long period of time.

The Handbook of Work Based Learning Apr 15 2022 Organizational leaders, governments and trade unions all agree that learning is fundamental to organizational and economic success. The question is how it should best be supported. The Handbook of Work Based Learning delivers a compelling answer to this question. Learning needs to be based in the realities of organizational life. This unique, groundbreaking handbook provides a definitive guide to the set of strategies, tactics and methods for supporting work based learning. The three main parts of the Handbook, which focus in turn on strategies, tactics and methods, are written for both the learner and the professional developer alike. Each includes

a description of the process (strategy, tactic or method), provides examples of what it looks like in action, explains the benefits and the likely limitations and provides a set of operating hints for applying the process. Nothing has been neglected, so alongside detailed descriptions of what to do and how to do it, the authors have included the Declaration on Learning, created by thirteen of the major figures in the field of organizational learning, a section guiding you towards routes for gaining qualifications, along with a well-researched set of references and further reading.

Anomaly Detection in Power Distribution System Measurements Using Machine

Learning Jan 24 2023 Sensor measurements of distribution system are uncertain due to sensor malfunctions, communication failure and cyber attacks. This thesis aims to perform anomaly detection on measurements utilizing data-driven approaches. The measurements considered are individual smart meter real power measurements and network-wide primary voltage magnitudes. Anomaly detection in individual smart meter measurements using gaussian probabilistic thresholds is explored. It flags non-anomalous data as verified by the comparison of smart meter real power and individual appliance consumption. To perform a real-time comparison for detection, Non-Intrusive Load Monitoring (NILM) is needed, which is difficult due to the associated

consumer privacy issues. Alternatively, forecasting can be used for anomaly detection. So, single layer neural network models such as Multi-Layer Perceptron (MLP), and Long Short Term Memory (LSTM) with different features are tried. Even in training data, a poor performance is seen in these models, due to the smart meter profile variability. Hence, aggregated smart meter forecasting using neural networks can be used to detect anomaly in such aggregated measurements with a reasonable accuracy. Network-wide primary voltage measurements are correlated for a phase of feeder for different buses at a given time-step; this is extensively validated empirically. To leverage this, Principal Component Analysis (PCA) is used to reduce the dimensionality of this input data. Further, residual and subspace based methods are explored for network-level anomaly detection and identification. The results for the residual approach on missing and bad data cases are detailed for IEEE 13 bus and IEEE 8500 node test feeders. It is validated through simulations that residual-based approach on subspace projection matrix for the measurement data successfully performs anomaly detection and identification for primary network voltage measurements for the selected test cases. Further research is needed to validate the applicability and accuracy of the proposed framework during changes in the system operating conditions (topology changes, capacitor bank switching, etc.), and on real-

world measurements from sensors deployed in the field.

Energy Information Abstracts Jun 05 2021
[Handbook of Statistical Bioinformatics](#) Nov 10 2021 Now in its second edition, this handbook collects authoritative contributions on modern methods and tools in statistical bioinformatics with a focus on the interface between computational statistics and cutting-edge developments in computational biology. The three parts of the book cover statistical methods for single-cell analysis, network analysis, and systems biology, with contributions by leading experts addressing key topics in probabilistic and statistical modeling and the analysis of massive data sets generated by modern biotechnology. This handbook will serve as a useful reference source for students, researchers and practitioners in statistics, computer science and biological and biomedical research, who are interested in the latest developments in computational statistics as applied to computational biology.
