Theories of Choice May 24 2020 This book provides an in-depth discussion of the promises and perils of specific types of theories of choice. It shows how the selection of a specific theory of choice can make a difference for concrete legal questions, in particular in the regulation of the digital economy or in choosing between market, firm, or network.

Preliminary Measurements of Faraday Rotation with the 430 Mc/s Radar System at Arecibo, Puerto Rico Nov 17 2019 Successful first measurements of Faraday rotation were made with the 430 Mc/s radar system at Arecibo, Puerto Rico. Measurements with a corner reflector in the near field established the approximate range of linear polarization. Experiments with the ionosphere and a series of moon experiments coordinated with the Cornell Radio Astronomy 430 Mc/s polarimeter in Danby, New York resulted in finer polarization tuning. The receiver and data-processing system was measured and evaluated for Faraday rotation measurements and an optimum system chosen. Programs for data reduction were developed. Electron density profiles were generated for several days from Faraday rotation measurements. Power profiles made at the same time have provided an estimate of T_e/T_i . (Author).

Global Warming and Climate Change Dec 23 2022

The Role of Innovation and Entrepreneurship in Economic Growth Sep 27 2020 "Innovation and entrepreneurship are ubiquitous today, both as fields of study and as starting points for conversations among experts in government and economic development. But while these areas on continue to attract public and private investments, many measurements of their resulting economic growth-including productivity growth and business dynamism-have remained modest. Why this difference? Because not all business sectors are the same, and the transformative gains of some industries have been offset by stagnation or contraction in others. Accordingly, a

nuanced understanding of the economy requires a nuanced understanding of where innovation and entrepreneurship occur and where they matter. Answering these questions allows for strategic public investment and the infrastructure for economic growth. *The Role of Innovation and Entrepreneurship in Economic Growth*, the latest entry in the NBER conference series, seeks to codify these answers. The editors leverage industry studies to identify specific examples of productivity improvements enabled by innovation and entrepreneurship, including those from new production technologies, increased competition, new organizational forms, and other means. Taken together, the volume illuminates whether the contribution of innovation and entrepreneurship to economic growth is likely to be concentrated, be it selected sectors or more broadly"--

Carbon Capture and Sequestration Oct 09 2021 The United States produces over seventy per cent of all its electricity from fossil fuels and nearly fifty per cent from coal alone. Worldwide, forty-one per cent of all electricity is generated from coal, making it the single most important fuel source for electricity generation, followed by natural gas. This means that an essential part of any portfolio for greenhouse gas emissions reductions will be technology to capture carbon dioxide and permanently sequester it in suitable geologic formations. While many nations have created incentives to develop of CCS technology, large regulatory and legal barriers exist that must still be addressed. This book identifies current law and regulation that applies to geologic sequestration in the U.S., the regulatory needs to ensure that geologic sequestration is carried out safely and effectively, and barriers that current law and regulation present to timely deployment of CCS. The authors find the three most significant barriers to be: an ill-defined process to access pore space in deep saline formations; a piecemeal, procedural and static permitting system; and the lack of a clear, responsible plan to address long-term liability associated with sequestered CO₂. The book provides legislative options to remove these barriers and address the regulatory needs, and makes recommendations on the best options to encourage safe, effective deployment of CCS. The authors propose recommendations in legislative language, which is of particular use to policy makers faced with the challenge of addressing climate change and energy

Electric and Magnetic Fields from 60 Hertz Electric Power Jun 05 2021

Risk Communication Mar 02 2021 The procedure uses approaches from risk and decision analysis to identify the most relevant information; it also uses approaches from psychology and communication theory to ensure that its message is understood. This book is written in

nontechnical terms, designed to make the approach feasible for anyone willing to try it. It is illustrated with successful communications, on a variety of topics."--Jacket.

In-flight Radio Frequency Spectrum Measurements of Commercial Aircraft Cabins Oct 17 2019

This study provided the first reported characterization of the radio frequency environment in the cabins of commercial airline flights. The key conclusions were that (1) onboard cellular telephone calls were observed in-flight and activity is appreciable; (2) signal activity was observed in the aviation critical frequency bands at field strengths capable on causing interference to onboard avionics; and (3) onboard spectral activity was observed at flight critical phases. These findings carry implications for both future research and public policy. Before the industry moves forward with policy changes, significantly more field measurement and analysis of the potential for interference is urgently needed. These studies should include a consideration of the implications of having many onboard transmitters and the potential risks posed by intermodulation.
