Publisher's Note: Products purchased from 3rd Party sellers are not guaranteed by the Publisher for quality, authenticity, or access to any online entitlements included with the product. Clinical Cases in Eye Care provides real-world case examples to illustrate the current scope of primary eye care practice. Over 120 clinical cases help readers gain familiarity with frequently seen scenarios as they would unfold in a typical setting. This case collection is a useful teaching and learning tool for instructors, students and clinicians. Starting a placement or rotation in an unfamiliar clinical area is exciting but can be daunting. CLINICAL CASE STUDIES IN PHYSIOTHERAPY provides invaluable advice and practical guidance on cases and problems encountered on a daily basis allowing you to work with ease and confidence. By adopting a problem solving approach to the cases through the use of questions and answers, the authors will help you to think constructively about each case within all the key specialities of physiotherapy. Starting a placement or rotation in an unfamiliar clinical area is exciting but can be daunting. CLINICAL CASE STUDIES IN PHYSIOTHERAPY provides invaluable advice and practical guidance on cases and problems encountered on a daily basis allowing you to work with ease and confidence. By adopting a problem solving approach to the cases through the use of questions and answers, the authors will help you to think constructively about each case within all the key specialities of physiotherapy. Hints and tips to get you ready for clinical placement How to secure your first physiotherapy post Case studies in the following clinical areas: respiratory, orthopaedics, neurology, musculoskeletal out-patients, care of the elderly, mental health and womens health Cases covering paediatrics also included This book presents and describes a series of informative clinical cases with the aim of providing the reader with a clear understanding of the most frequent and challenging scenarios that a cardiologist may face during daily clinical practice. All major topics in modern clinical cardiology are addressed, including acute ischemic heart disease, conditions that mimic ischemic heart disease, heart failure and resynchronization therapy, cardiomyopathy, valvular heart disease, arrhythmias and channelopathies. Guidance is provided on imaging techniques and their interpretation, patient management taking into account potential comorbidities and follow-up appropriate to the clinical circumstances. The paradigmatic clinical cases in this book will serve as a sound basis

for learning for medical students, residents and others wishing to meet successfully the challenges posed by cardiac disease. In addition, the book will be a very useful reference for the more experienced cardiologist. Clinical Case Studies on Medication Safety provides real and simulated scenarios about safety issues related to medication, including Adverse Drug Reactions (ADRs), medication errors, and Drug Related Problems (DRPs). The book explains real-life case management, including details about adverse drug reactions, mistakes during drug administration, drug avoidance, and drug-drug interactions with a goal of improving patient care. With over 150 case studies, including cases from alternative medicine and traditional medicine, this book will help medical and health sciences educators, students, healthcare professionals, and other readers apply their knowledge and skills to solve cases for better patient care. Includes real and simulated case studies about drug safety issues Aids medical students and practitioners to improve their case solving skills Contains more than 150 case studies with questions and key answers This book highlights the most commonly encountered cases in paediatric practice. This is a useful guide for the undergraduate medical students preparing for the practical and viva voce competitive examinations. Postgraduate students, practicing paediatricians and teachers find it a valuable reference source. About the Author : - R. Arvind, MBBS, DCH, DNB, Consultant Paediatrician and Neonatologist, Managing Director, Vathsalya Speciality Hospital, Basaveshwarnagar, Bangalore, India. This latest book in the Clinical Cases in Dermatology series presents a variety of cases of pruritus. A clear easy-to-follow chapter structure throughout the work enables the reader to develop a thorough understanding of the content covered in each case. An emphasis is placed on key features that distinguish pruritus from other conditions to ensure the reader develops their diagnostic skills. Practically applicable guidance on how to appropriately manage the disorder to assist the reader in the clinical decision-making process is also provided. Clinical Cases in Pruritus is a concise practically applicable resource detailing how to diagnose and manage pruritus in a variety of scenarios. Therefore, it is of interest to practicing and trainee dermatologists seeking a concise up-to-date resource on the topic. It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects the average length of stay for a patient in hospital, in which their situation can change in a multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise. Demonstrates the real bedside experiences that medical students can expect, in whichever simple or complex way that they may present Cases selected from a range of sub-specialties for comprehensive coverage across the curriculum Illustrates the complicated, progressive problems that will be seen while practicing as a doctor with detailed diagrams and diagnostic imagery to aid understanding Shows, with timepoints, how differential diagnoses may change as more information becomes available and new symptoms arise Describes a typical initial hospital stay, and subsequent presentations to the general practitioner and hospital readmission The Authors Andrew Solomon, BM BCH MA(Hons) DM FRCP, is a Consultant Physician, East and North Hertfordshire NHS Trust, Stevenage, UK. Julia Anstey, BSc (Hons) MBBS, is a Foundation Doctor, Somerset NHS Foundation Trust, Taunton, UK. Liora Wittner, MBBS BSc, is a Resident in Internal Medicine, Shamir Medical Centre, Be'er Ya'akov, Israel. With contributions from Priti Dutta, MBBS BSc FRCP, Consultant Radiologist, Royal Free London NHS Foundation Trust, London, UK. Wiley-Blackwell's "Clinical Cases" series is designed to recognize the centrality of clinical cases to the profession by providing actual cases with an academic backbone. Clinical Cases in Prosthodontics grounds itself in core principles of this rehabilitative specialty and demonstrates their practical, every-day application through range of case presentations building from simple to complex and from common to rare. This unique approach supports the

new trend in case-based and problem-based learning, thoroughly covering topics ranging from conventional complete denture prostheses to full mouth rehabilitation using both implant and tooth-supported prostheses. Each case begins with a short description of the initial patient presentation and the learning objectives and goals the subsequent case discussion will demonstrate. This is accompanied by relevant medical and dental histories, notes on extra-oral and soft tissue examination and a thorough list of clinical findings, all presented in bulleted form to facilitate ease of learning. Clinical decision making factors are then discussed in detail, well illustrated with multiple clinical photos showing progressive stages of treatment. Cases conclude with review questions and relevant literature citations supporting each answer. Ideal for practitioners and students alike, *Clinical Cases in Prosthodontics* is the ultimate resource linking evidence-based research to every-day application. This title recognises that clinical cases are a key component in modern medical education, assisting the trainee or recertifying clinician to work through unusual cases using best practice techniques. It also acknowledges that psoriasis is an important discipline in this regard since it is a highly visual subject requiring the reader to describe often very subtle differences in the presentation of patients and define accurately the diagnostic and management criteria to base their clinical decision-making on. The objective of this book is to provide readers with an overview of the diagnosis and multidisciplinary management of psoriasis. As part of the *Clinical Cases in Dermatology* series, the range of titles cover the most common skin problems encountered in clinical practice and many of the rarer diseases that may be encountered by the practicing dermatologist. *Clinical Cases in Dental Hygiene* is an indispensable resource to understanding both the theory and practice of dental hygiene, illustrated by real-life cases in a clinically relevant format. Offers a unique case-based format that supports problem-based learning Promotes independent learning through self-assessment and critical thinking Includes a wealth of relevant cases for understanding dental procedures and management of patients Covers all essential topics within the scope of dental hygiene A problem-based text that presents a wide range of real cases in endodontics *Clinical Cases in Endodontics* presents actual clinical cases, accompanied by academic commentary, that question and educate the reader about essential topics in endodontic therapy. It begins with sets of cases illustrating the most common diagnoses and the steps involved in preparing a treatment plan. Subsequent chapters continue in this style, presenting exemplary cases as the basis of discussing various treatment options, including nonsurgical root canal treatment, re-treatment, periapical surgery, internal and external resorption, emergencies and trauma, and treating incompletely developed apices. The progression from common to increasingly challenging clinical cases enables readers to build their skills, aiding the ability to think critically and independently. The *Clinical Cases* series is designed to recognize the centrality of clinical cases to the profession by providing actual cases with an academic backbone. *Clinical Cases in Endodontics* applies both theory and practice to real-life cases in a clinically relevant format. This unique approach supports the trend in case-based and problem-based learning, thoroughly covering the full range of endodontic treatment. Unique case-based format supports problem-based learning Promotes independent learning through self-assessment and critical thinking Covers all essential topics within endodontics Presents numerous illustrations and photographs throughout to depict the concepts described *Clinical Cases in Endodontics* is an ideal resource for students mastering endodontic treatment, residents preparing for board examinations, and clinicians wanting to learn the most recent evidence-based treatment protocols. Be ready for both the Step 2 & 3 USMLE exams and those demanding questions during your rotations. The new *Blueprints Clinical Cases* series will be the answer to all of your needs. Written by residents and faculty, this series prepares you for even the most complex cases. 50 Symptom based clinical cases provide comprehensive USMLE review Built-in thought questions help you learn to diagnose using the critical thinking process Case-based learning presents an efficient manner of

cataloguing symptoms, syndromes, and diseases 200 questions replicate the computer format of the USMLE Prepare for your future with the Blueprints Clinical Cases series! Perfect for medical students -- physician assistants, nurse practitioners and related health professionals will also find Blueprints Clinical Cases valuable. Acute Medicine is the central part of foundation and specialist general medical training and is one of the most rapidly expanding UK hospital specialties. Acute Medicine: Clinical Cases Uncovered combines patient cases and outcomes, drawn from real-life experiences, with reference to the curriculum for Training in General (Acute) Medicine. It provides self-assessment MCQs, EMQs and SAQs to give medical students, junior doctors, nurses and allied healthcare professionals the perfect preparation for life on the wards. This clinical case book serves as a useful guide for dermatologists, internists, family practitioners, pediatricians, and anyone else charged with the care of infectious diseases of the skin of parasitic, fungal, bacterial, and viral origin. The case-based format distinguishes this work from a reference-style textbook, allowing readers to relate the presented cases to their own practice. Clinical Cases in Infections and Infestations of the Skin provides help and insight for clinicians in managing skin disease, with each chapter serving as a springboard for further pursuit and more extensive training. The reader will find useful information and tools to help patients and will enable readers to add to their current clinical regimens by becoming familiar with healing systems beyond medical dermatology. The book will enable those new to the field to develop a literacy and competence in the management of infectious dermatology. For the more experienced learner, it will assist in finding new ways to sharpen diagnostic and treatment acumens. This book provides a guide to the diagnosis and management of melanoma. Clinical cases are examined to give the reader an understanding of new diagnostic tools including total body photofinders, two photon excitation florescence microscopy and confocal microscopy. Each case is presented in relation to immunotherapy and quality of life and examines the therapeutic outcomes of newly introduced therapies. Clinical Cases in Melanoma highlights evidence-based best practice through a multidisciplinary approach that is relevant to dermatologists, as well as oncologists, pharmacologists and pathologists. This concise practical guide is designed to facilitate the clinical decision-making process by reviewing a number of cases and defining the various diagnostic and management decisions open to clinicians. It is well illustrated and diverse in scope, enabling the reader to obtain relevant clinical information regarding both standard and unusual cases in heart failure in a rapid, easy to digest format. Clinical cases are a key component in modern medical education, assisting the trainee or recertifying clinician to work through unusual cases using best practice techniques. Cardiology is a key discipline in this regard and is a highly visual subject requiring the reader to describe often very subtle differences in the presentation of patients and define accurately the diagnostic and management criteria on which to base their clinical decision-making. This title therefore provides valuable assistance to trainees and clinicians alike in evaluating patients and defining an appropriate procedure for each case covered. Be ready for both the Step 2 & 3 USMLE exams and those demanding questions during your rotations. The new Blueprints Clinical Cases series will be the answer to all of your needs. Written by residents and faculty, this series prepares you for even the most complex cases. 50 Symptom based clinical cases provide comprehensive USMLE review Built-in thought questions help you learn to diagnose using the critical thinking process Case-based learning presents an efficient manner of cataloguing symptoms, syndromes, and diseases 200 questions replicate the computer format of the USMLE Dysphagia is a complex condition that can have significant social, developmental and psychological effects. Alongside the physiology and pathophysiology of the condition, dysphagia can rob patients of the most basic pleasures, such as eating and drinking, causing ongoing difficulties for individuals in social situations throughout the lifespan. As an acknowledged component of evidence-based practice, the humble case report encourages clinical reflection and may be the spark that generates new thinking and motivation for future

research. **Clinical Cases in Dysphagia** provides an opportunity to gain insight into the unique and varied presentation and management of dysphagia across a range of different conditions. With chapters provided by expert clinicians and based on clinical examples 'from the trenches', the reader may gain insights into their own practice patterns, refining their clinical problem solving and valuing the education that is offered to each of us by our patients. With additional online resources to support the case-based approach, the book emphasizes the importance of multidisciplinary care and reflects everyday clinical practice, making it a must-read for clinicians and students. Wiley-Blackwell's Clinical Cases series is designed to recognize the centrality of clinical cases to the profession by providing actual cases with an academic backbone. **Clinical Cases in Orthodontics** applies both theory and practice to real-life orthodontic cases in a clinically relevant format. This unique approach supports the new trend in case-based and problem-based learning, thoroughly covering topics ranging from Class I malocclusions to orthognathic surgery. Highly illustrated in full color, **Clinical Cases in Orthodontics'** format fosters independent learning and prepares the reader for case-based examinations. Using an easily accessible, highly templated format, **Clinical Cases in Tropical Medicine, 2nd Edition**, provides more than 100 realistic scenarios for tropical infectious diseases. Full-color photographs and maps, a convenient question-and-answer presentation, and succinct summary boxes help you identify and understand the tropical diseases you're likely to encounter. This up-to-date 2nd Edition is an excellent resource and study tool for infectious diseases fellows, doctors preparing for exams in tropical medicine, primary care doctors with patients who are global travelers, and global health nurses and practitioners alike. Offers realistic scenarios for encountering patients in rural, resource-poor settings, presenting cases as "unknowns," just as in a real clinic or emergency situation. Covers newly emerging diseases such as Zika virus, severe fever with thrombocytopenia syndrome (SFTS), and knowlesi malaria. Features topics in migrant medicine of particular importance to clinicians in non-tropical countries, including louse-borne-relapsing fever, spinal brucellosis, and hyperreactive malarial splenomegaly. Includes "classic" tropical diseases such as African trypanosomiasis, chagas, leprosy, and yaws. Reflects the use of novel diagnostics used in resource-poor settings, as well as developing drug resistance in relevant cases. Provides a useful index and map that organize cases geographically, for a targeted approach to study. Serves as a companion to Manson's Tropical Diseases, with a reading list at the end of each case referring to the corresponding chapter in the larger text. This useful new book enables students to apply the theoretical knowledge gained in their medicine classes to clinical cases. Students will improve their diagnostic skills as they are taken simply and logically through the steps of generating a differential diagnosis, weighing up evidence to refine a hypothesis, and constructing a management plan. Author Samy Azer guides readers to use self-directed learning to identify their learning needs and ultimately develop a deeper understanding of internal medicine. Designed to complement and enhance recommended undergraduate medicine textbooks, this book is easy to follow and written simply, making it suitable for students who speak English as a second language. More than 50 clinical cases, covering the core undergraduate medicine curriculum Case discussions using a logical and scientific approach to help students achieve their own diagnoses Model answers for comparison, to improve learning outcomes Summary of fundamental points for examination revision Useful up-to-date resources Short-answer and multiple-choice questions to test knowledge Diagrams and tables to deepen understanding and consolidate essential concepts Includes an Enhanced eBook version with purchase. The enhanced eBook allows the end user to access all of the text, figures, and references from the book on a variety of devices Health Sciences & Professions * A guide to differential diagnosis of common neurological disorders * Illustrated case presentations are used to lead the reader through the process of differential diagnosis * Multi-contributed under the editorship of two leading neurologists from the UK and US * A guide to

differential diagnosis of common neurological disorders * Illustrated case presentations are used to lead the reader through the process of differential diagnosis * Clinical advice includes details of which management options to consider and their use in practice

Intraocular inflammation is particularly difficult to diagnose and treat, often resembling a complex puzzle of patient history, symptoms, imaging, and laboratory test results. Clinical Cases in Uveitis: Differential Diagnosis and Management is a unique, case-based resource designed to help you navigate the range of challenging manifestations and presentations that often mimic other diseases. More than 90 real-world uveitis cases are presented in a highly templated, easy-to-follow format, along with step-by-step guidance on the right patient questions, assessment, differential diagnosis, testing, management, and follow-up care. Provides a variety of patient presentations and scenarios and unique clinical situations that mirror day-to-day practice. Covers current diagnostic imaging modalities, including optical coherence tomography (OCT), optical coherence tomography angiography, fluorescein angiography (FA), and indocyanine green angiography (ICG). Features diagnostic and management algorithms that assist in differential diagnosis and decision making for even the most complex cases, including those in which the patient does not improve as expected, prompting a reassessment of diagnosis and management. Contains approximately 250 high-quality images, including color anterior segment photographs, color fundus photographs, OCT images, and angiograms. Discusses distinguishing infectious from non-infectious inflammation; when and how to start systemic immunosuppressive therapy; diagnostic criteria and management of "white dot syndromes ; pediatric uveitis; masquerade syndromes, including inherited retinal degenerations, malignancies, and paraneoplastic syndromes; and much more. Includes the authors' specific thought processes and approach in particularly challenging cases. An excellent resource and study tool for ophthalmology residents and fellows, those studying for oral boards, general ophthalmologists, retina specialists, and more. A new, fully updated edition of Baliga's very popular collection of short cases arranged by clinical area, emphasising the key diagnostic features of clinical conditions as commonly presented in the short-case part of the Final MB and MRCP examinations. Also included are likely instructions or commands expected from the examiner for each condition, and the key points which the candidate must tell the examiner. A must-have for the final-year undergraduate and trainee doctor. From customer reviews of the previous edition: 'This book is the most useful guide that money can buy for the final exams in the current MBChB undergraduate course. It covers important areas of clinical medicine in a question based format and highlights classical scenarios. The questions raised are classical of examiners in the long and short case examinations. This is a must buy for any undergraduate medical student!!!' 'The book is a must during the period that the young doctor or student is on the wards. It allows one to focus on the important physical findings and the relevant clinical pearls associated with the different medical conditions met... It discusses important physical findings and their diagnostic importance. I have found it useful in preparing for attending ward rounds and also for sharpening my clinical skills. The discussion section is well organised such that undergraduates as well as postgraduates can benefit and the material is up to date with good references for further reading.' 'Excellent preparation for finals as well the MRCP ...MUST HAVE before MRCP PACES.' Features Ideal for use in the ward. Each of the 250 cases presents a disease or topic which is covered consistently to address: ? salient features ? history ? examination ? diagnosis ? questions covering investigations and differentiations ? advanced-level questions ? management. New to this edition: Over 350 new images Enhanced advanced-level questions Many more tables Maintaining the original popular format enjoyed by so many readers, this Second Edition features comprehensive updates to all 66 cases to include the latest diagnostic and treatment techniques. Each chapter also includes brand-new cases, for a total of 13 entirely new cases. The most current references to the literature, best practices, and evidence based clinical guidelines, plus new and updated self-assessment questions with

detailed answers and explanations, have been added to all the cases. This second edition maintains the same aim of presenting actual clinical cases to question and educate the reader on pediatric dentistry, using a clear, concise, and consistent format to offer a case history, diagnostics and treatment plans for each case. **Clinical Cases in Pediatric Dentistry, Second Edition** is based on the most current evidence, with standards of care and policies as adopted by relevant associations and societies. This important resource: Presents updated content, clinical guidelines, and references in existing cases, with thirteen brand new case scenarios Takes an easy-to-follow format, with patient history and diagnostics, questions, and answers, and explanations for each case Part of the "Clinical Cases" series applying both theory and practice to actual clinical cases Includes access to a companion website featuring additional case studies, charts, tables, web links, and the figures from the book in PowerPoint Presenting real-world cases that encompass all-important areas of pediatric dentistry, **Clinical Cases in Pediatric Dentistry, Second Edition** is an essential resource for pre-doctoral dental students, post-graduate residents, and pediatric dentists preparing for board examinations and recertification. It's also an excellent guide for students and faculty in pediatric dentistry departments, as well as practicing pediatric dentists and family dentists. **Clinical Cases in Gerodontology** provides a comprehensive overview of the most relevant dental issues that arise when dealing with an aging population. **Clinical Cases in Gerodontology** applies the theory and practice to real-life cases in a clinically relevant format. To aid learning, each of the clinical cases presented has a defined learning objective and goal. In addition, the authors discuss in detail the clinical decision-making factors and the text is enhanced with photographs that demonstrate the progressive stages of treatment. This important text: Offers a case-based guide to geriatric dental care Includes the thinking behind clinical decision making Fosters independent learning and prepares for case-based examinations Contains review questions and relevant literature citations Written for graduate and undergraduate dental students and professionals, **Clinical Cases in Gerodontology** offers an instructive case-based guide to the oral health of older adults. You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. **Core Clinical Cases** guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its practical approach strongly linked to underlying theory, the series integrates your knowledge with the r Actual case studies in a Q & A format explore contemporary problems in anesthesia, and provide practical solutions based on a careful examination of all of the important scientific and clinical principles for each case. The 3rd Edition offers brand-new coverage of key topics in the cardiovascular, respiratory, central nervous system, abdomen, and post-anesthesia care sections as well as a completely new section on trauma. It also addresses important topics such as hemophilia, infant anesthesia, lower extremity anesthesia, and celiac plexus blocks. All of the existing cases are thoroughly revised to include new treatments and practice guidelines, and new knowledge of the relevant pharmacology. It's an ideal review tool for board preparation, and a handy resource for practice. Offers solutions to frequently occurring practical problems through discussions of pathophysiology, pharmacology, preoperative evaluation, and intraoperative care. Facilitates the proper identification of both common and rare clinical problems. Examines the crucial scientific and clinical principles for each case study. A completely new section on trauma features five new cases: blunt vs. penetrating trauma - neck and airway trauma - thoracic trauma - closed head injury with open femur fracture - and burns. The cardiovascular section offers new cases relating to: cardiac tamponade - cardiomyopathy - noncardiac surgery after heart transplantation - coronary artery bypass grafting - and do-not-resuscitate. The respiratory section features new cases on post-thoracotomy complications and thoracoscopy. The central nervous system content is enriched with cases on monitoring in spinal injury - transsphenoidal hypophysectomy - and magnetic resonance imaging. LThe abdominal section offers new cases on endovascular surgery - morbid obesity - laparoscopy -

carcinoid and kidney transplant. Important topics such as hemophilia - infant anesthesia - lower extremity anesthesia - and celiac plexus blocks are now covered. Postanesthesia care is expanded to include pulmonary function testing - respiratory failure - delayed emergence - coma and brain death - and anaphylaxis. The existing cases are thoroughly revised to include the new treatments, treatment guidelines, and the relevant pharmacology. 100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases. You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core areas of undergraduate study are covered in a logical sequence of learning activities; the same questions are asked of each clinical case, followed by detailed explanatory answers. OSCE counselling cases, with related questions and answers, also feature in each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making these volumes the perfect revision aid for all types of case-based examination. The Obstetrics and Gynaecology volume, fully revised and updated in this third edition, focuses on the following topics: * Early pregnancy problems * Pregnancy dating and fetal growth * Late pregnancy problems * Labour * Medical disorders of pregnancy * Puerperium * Abnormal uterine bleeding * Amenorrhoea and menopause * Incontinence and prolapse * Neoplasia * Discharge and pain* Infertility * Fertility control

Volumes in the Core Clinical Cases series remain absolutely invaluable in the run up to clinical, written or OSCE examinations, and ideal course companions for all undergraduate medical students at various stages in their clinical training. The new edition of this book is a comprehensive guide to the diagnosis and management of paediatric diseases and disorders. Presented as a collection of 105 clinical cases ranging from the most common to the most rare conditions, each topic explains history, signs and symptoms, clinical features, examination and investigation techniques, differential diagnosis, treatment options, and complications. The fifth edition has been fully revised and updated to provide clinicians with the latest advances and techniques in the field. New cases covering Henoch-Schönlein purpura, infectious mononucleosis, and obesity, have been added to this edition. The extensive text is highly illustrated with clinical photographs and diagrams, and an exhaustive glossary provides a ready reckoner for practical and viva voce examination preparation. The previous edition (9789352501793) published in 2016. Based on real life scenarios, the Clinical Cases series presents quality case studies, complete with answers, to provide nursing students with an opportunity to explore scenarios they are likely to encounter in a variety of practice settings. Clinical Cases: Nursing Care Case Studies is perfect for use during exam preparation or as a study tool, providing an engaging approach to learning and revision. The newly revised Second

Edition of Clinical Cases in Periodontics delivers a comprehensive collection of clinical cases on critical topics within the discipline of periodontology. The book is thoroughly updated to incorporate recent developments in the field, along with new classifications of periodontal disease, common diagnoses, and a wide range of treatment options. 43 real-world clinical cases are discussed in this collection, including 8 brand-new cases unique to this edition, all of which include commentary and high-quality images to improve reader comprehension and understanding. The cases cover topics such as surgical and non-surgical treatment, regenerative therapy, mucogingival therapy, and interdisciplinary treatments. Clinical Cases in Periodontics offers: A thorough introduction to periodontic examination and diagnosis, including documentation, plaque, and non-plaque induced gingivitis A comprehensive exploration of non-surgical periodontal therapy, including local anatomic factors contributing to periodontal disease and local drug delivery Practical discussions of resective periodontal therapy, including gingivectomy and flap osseous surgery In-depth examinations of regenerative therapy, including the treatment of furcation and guided bone regeneration The latest advances in inter-disciplinary care, encompassing orthodontics, prosthodontics, and implant dentistry A companion website featuring the images from the book in PowerPoint The latest edition of Clinical Cases in Periodontics is ideal for dental students, periodontology residents, dental practitioners, and anyone else seeking periodontal clinical case studies. Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its practical approach strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing problem-solving skills. The core areas of undergraduate study are covered in a logical sequence of learning activities: each is followed by a detailed answer, along with a number of short-answer questions to help you practice for examinations in the first two to three years of your course. Mechanisms showing the pathogenesis of a disease process and explanations of the clinical findings and laboratory investigations have been included. This book provides a highly structured case history text covering each of the important components of the undergraduate biomedical sciences, in the form of 45 clinical scenarios. Each scenario is followed by eight to ten questions and answers with detailed feedback. Clinical Case Studies for the Family Nurse Practitioner is a key resource for advanced practice nurses and graduate students seeking to test their skills in assessing, diagnosing, and managing cases in family and primary care. Composed of more than 70 cases ranging from common to unique, the book compiles years of experience from experts in the field. It is organized chronologically, presenting cases from neonatal to geriatric care in a standard approach built on the SOAP format. This includes differential diagnosis and a series of critical thinking questions ideal for self-assessment or classroom use. This book is a quick reference guide to emergency medicine for clinicians and trainees. Presented as clinical case studies, it is divided over 21 chapters, each covering scenarios in different body systems. Cases are presented in an easy to read format, helping trainees form a diagnosis and quick treatment plan. The final section covers disaster management. Each case highlights clinical pearls and pitfalls, emphasizing the importance of a mis-diagnosis and its legal implications. Written by a recognised specialist from Chicago Medical School, the practical manual includes nearly 250 photographs, diagrams, tables and charts to enhance learning, as well as further reading suggestions. Key points Quick reference guide presenting 101 clinical case studies for emergency medicine clinicians and trainees Covers emergencies in all body systems Includes chapter on disaster management Authored by expert from Chicago Medical School Medical curricula change continually to reflect the evolving roles of doctors, changes in treatments and advances in technology. Medicine moves at pace and it takes a practitioner committed to continuing professional development to keep up. This new edition of 250 Cases in Clinical Medicine has been thoroughly updated to reflect the changing form of the Royal College of Physicians' curriculum. Some chapters from

the previous edition have been dropped to allow new, more clinically relevant topics to be included. Chapters of symptom-based cases have also been added, as well as a section on acute medical problems and their management. Essential reading for MBBS, PLAB, MRCP (UK), MRCPI, MD (New Zealand, Malaysia, Singapore, India, Pakistan, Sri Lanka and Bangladesh), FRACP, FCCP and postgraduate medical examinations in the USA including USMLE and ABIM. New author team Cases alphabetised by system Procedures for the core medical curriculum added Symptoms-based cases added Emergency presentations added Self-assessment by system added Accompanying e-book on StudentConsult Now in full colour New author team Cases alphabetised by system Procedures for the core medical curriculum added Symptoms-based cases added Emergency presentations added Self-assessment by system added Accompanying e-book on StudentConsult Now in full colour Presents trainees with detailed clinical cases for numerous diseases and disorders covering various body systems including respiratory, gastroenterology, neurology and haematology. Questions and answers are provided at the end of each case.
