Hebrews: An Introduction and Study Guide Sep 27 2020 This volume offers a compact introduction to one of the most daunting texts in the New Testament. The Letter to the Hebrews has inspired many readers with its encomium to faith, troubled others with its hard sayings on the impossibility of a second repentance, and perplexed still others with its exegetical assumptions and operations drawn from a cultural matrix that is largely alien to modern sensibilities. Long thought to be Paul, the anonymous author of Hebrews exhibits points of continuity with the apostle and other New Testament writers in the letter's (or sermon's) vision of life in the light of the crucified Messiah, but one also finds distinctive perspectives in such areas as Christology, eschatology, and atonement. Gray and Peeler survey the salient historical, social, and rhetorical factors to be considered in the interpretation of this document, as well as its theological, liturgical, and cultural legacy. They invite readers to enter the world of one of the boldest Christian thinkers of the first century.

Pathway to Freedom Feb 01 2021 God's code of conduct is as relevant and insistent today as it's always been. The landscape of contemporary society reveals that we neither know nor care much about the Law of God. There is: A general lawlessness in the lives of professing Christians. An absence of the fear of God in public worship and private living. A growing confidence in ourselves and doubt concerning God and His Word. Amidst this moral crisis, the message of the Ten Commandments can give us order, direction, and hope. With dynamic implications for how each of us lives every day, *Pathway to Freedom* will challenge you to think long and hard about the significance of God's Law. "We have entered into a time of moral crisis in our culture and in the church as well. Stories about divorce, adultery, and the individualized picking and choosing of doctrines abound. *Pathway to Freedom* is forthright and necessary teaching that today's church cannot afford to ignore. How now shall we live? The beginning of the answer must be in obedience to God's moral law summarized in the Ten Commandments." —CHARLES COLSON, PRISON FELLOWSHIP MINISTRIES, WASHINGTON, D.C.

Who's Doing the Work? Jun 05 2021 In their follow-up to *Reading Wellness*, Jan Burkins and Kim Yaris explore how some traditional scaffolding practices may actually rob students of important learning opportunities and independence. *Who's Doing the Work?* suggests ways to make small but powerful adjustments to instruction that hold students accountable for their own learning. Educators everywhere are concerned about students whose reading development inexplicably plateaus, as well as those who face challenging texts without applying the strategies they've been taught. When such problems arise, our instinct is to do more. But when we summarize text before reading or guide students when they encounter difficult words, are we leading them to depend on our support? If we want students to use strategies independently, Jan and Kim believe that we must question the ways our scaffolding is getting in the way. Next generation reading instruction is responsive to students' needs, and it develops readers who can integrate reading strategies without prompting from instructors. In *Who's Doing The Work?*, Jan and Kim examine how instructional mainstays such as read-aloud, shared reading, guided reading, and independent reading look in classrooms where students do more of the work. Classroom snapshots at the end of each chapter help translate the ideas in the book into practice. *Who's Doing the Work?* offers a vision for adjusting

reading instruction to better align with the goal of creating independent, proficient, and joyful readers.

Key concept summaries reinforce critical material from the primary book and enhance mastery of this complex subject. For chemical engineers, understanding the properties of organic molecules and how reactions occur is critically important to understanding the processes in an industrial plant. For biologists and health professionals, it is essential because nearly all of biochemistry springs from organic chemistry. Additionally, all scientists can benefit from improved critical thinking and problem-solving skills that are developed from the study of organic chemistry. Organic chemistry, like any "skill", is best learned by doing.
