Scientists agree that we are on the precipice of a global climate crisis. How will it transform colleges and universities? In 2019, intense fires in the San Francisco Bay Area closed

universities and drove afflicted people to shelter at other campuses. At the same time, extraordinary fires ravaged eastern Australia. Several universities responded by promising material and research support to damaged businesses while also hosting refugees and emergency response teams in student residence halls. This was an echo of the devastation wreaked by Hurricane Katrina on Tulane University in 2005. In *Universities on Fire*, futurist Bryan Alexander explores higher education during an age of unfolding climate crisis. Powered by real-world examples and the latest research, Alexander assesses practical responses and strategies by surveying contemporary programs and academic climate research from around the world. He establishes a model of how academic institutions may respond and offers practical pathways forward for higher education. How will the two main purposes of education—teaching and research—change as the world heats up? Alexander positions colleges and universities in the broader social world, from town-gown relationships to connections between how campuses and civilization as a whole respond to this epochal threat. Current studies of climate change trace the likely implications across a range of domains, from agriculture to policy, urban design, technology, culture, and human psychology.

However, few books have predicted or studied the effects of the climate crisis on colleges and universities. By connecting climate research to a deep, futures-informed analysis of academia, *Universities on Fire* explores how climate change will fundamentally reshape higher education. Is foreign direct investment good for development? Moving beyond the findings of his previous book *Does Foreign Direct Investment Promote Development?* (CGD and IIE, 2005), Theodore H. Moran presents surprisingly good --and startlingly bad --news. The good news highlights how foreign direct investment can make a contribution to development significantly more powerful and more varied than conventional measurements indicate. The bad news reveals that foreign direct investment can also distort host economies and politics with consequences substantially more adverse than critics and cynics have imagined. This book rigorously examines the principal controversies and debates about FDI in manufacturing and assembly, extractive industries, and infrastructure, in light of new evidence and analysis. Written in engaging prose, it identifies how developed and developing countries, multilateral lending agencies, and civil society can work in concert to harness foreign direct investment to promote the growth and welfare of developing

countries. Collection Editions books give you this one time edition commemorating the end (as we know it) of the most popular factual television show in the planets history. Tracing the benefits—and limitations—of repurposing aluminum. Besides being the right thing to do for Mother Earth, recycling can also make money—particularly when it comes to upcycling, a zero waste practice where discarded materials are fashioned into goods of greater economic or cultural value. In *Upcycling Aluminum*, Carl A. Zimring explores how the metal's abundance after World War II—coupled with the significant economic and environmental costs of smelting it from bauxite ore—led to the industrial production of valuable durable goods from salvaged aluminum. Beginning in 1886 with the discovery of how to mass produce aluminum, the book examines the essential part the metal played in early aviation and the world wars, as well as the troubling expansion of aluminum as a material of mass disposal. Recognizing that scrap aluminum was as good as virgin material and much more affordable than newly engineered metal, designers in the postwar era used aluminum to manufacture highly prized artifacts. Zimring takes us on a tour of post-1940s design, examining the use of aluminum in cars, trucks, airplanes, furniture, and musical instruments from 1945 to 2015. By viewing upcycling

through the lens of one material, Zimring deepens our understanding of the history of recycling in industrial society. He also provides a historical perspective on contemporary sustainable design practices. Along the way, he challenges common assumptions about upcycling's merits and adds a new dimension to recycling as a form of environmental absolution for the waste-related sins of the modern world. Raising fascinating questions of consumption, environment, and desire, *Upcycling Aluminum* is for anyone interested in industrial and environmental history, discard studies, engineering, product design, music history, or antiques. *DieCast X* covers the entire spectrum of automotive diecast from customizing to collecting. it takes an insider's look at the history behind popular diecast cars and trucks, as well as how each model has helped shape the automotive industry and motor sports. *Lemon-Aid Used Cars and Trucks 2010-2011* shows buyers how to pick the cheapest and most reliable vehicles from the past 30 years of production. He provides important new data on the kinds of activities, types of jobs, and level of wages
