"It's true, what many say. Time and age have a way of rounding off the edges and making jagged pieces of the past seem clear and smooth and bright. But for those of us growing up in the small prairie town of Mandan, North Dakota, in the 1950s, those truly were times when every day was an adventure, every neighbor was a story, and everyone belonged somewhere because we were all connected and trusted others to know that. Young Moose knows it's going to be an unusual year when his new teacher

looks like a goat and is even ornerier, a neighborhood posse is hot on the trail of a felon, and the ancient ghosts are dancing in the light of a full moon. His days are full of trials including the cancelling of Christmas, tittering on the brink of flunking a grade, and losing his position as catcher on the baseball team. It's also a time of runaway horses and bucking pigs, a quest for the truth of the birds and the bees, and of taking a giant step towards manhood. Come follow Moose and his friends; an Indian Shaman, a Gypsy King, and a mystical boy named Mickey as they travel through the adventures."--Page 4 of cover

Probability theory is one branch of mathematics that is simultaneously deep and immediately applicable in diverse areas of human endeavor. It is as fundamental as calculus. Calculus explains the external world, and probability theory helps predict a lot of it. In addition, problems in probability theory have an innate appeal, and the answers are often structured and strikingly beautiful. A solid background in probability theory and probability models will become increasingly more useful in the twenty-first century, as difficult new problems emerge, that will require more sophisticated models and analysis. This is a text on the fundamentals of the theory of probability at an undergraduate or first-year graduate level for students in science, engineering, and economics. The only mathematical background required is knowledge of univariate and multivariate calculus and basic linear algebra. The book covers all of the standard topics in basic probability, such as combinatorial probability, discrete and continuous distributions, moment generating functions, fundamental probability inequalities, the central limit theorem, and joint and conditional

distributions of discrete and continuous random variables. But it also has some unique features and a forwa- looking feel. Nurse Nyla Franklin knows three things to be true. Mr. Always Does the Right Thing Leo Sayre knows three things to be true. Piloting smokejumpers over burning forests is the best job in the world. After meeting some travelers on a trip to Thailand in 2005, he realized that living life meant more than simply meeting society's traditional milestones, such as buying a car, paying a mortgage, and moving up the career ladder. Over 500,000 miles, 1,000 hostels, and 90 different countries later, Matt has compiled his favorite stories, experiences, and insights into this travel manifesto. Filled with the color and perspective that only hindsight and self-reflection can offer, these stories get to the real questions at the heart of wanderlust. Consummate travel writer Norman Lewis's most remarkable travel essays, collected in one volume "You'd find it of immense interest, I assure you, and full of amazing adventures." So says a British colonial official to Norman Lewis while imploring him to visit Yemen at a time when the country is rarely visited by Western travelers. And indeed, this splendid collection of Lewis's travel essays is full of amazing adventures. Spanning sixty years and many countries, Lewis's writing dives deep into the cultures he visits

and brings them to life with eloquent depictions of his personal experiences—from the Huichols of western Mexico to the hunter-gatherer-poet Indians of Paraguay; from the streets of Naples to the steppes of Russia during the Soviet era; and more.
